

POLYSURLYN MOISTURE BARRIER

Polysurlyn Moisture Barrier (PSMB) is a versatile three layer coextruded film of polyethylene and surlyn* polymers with a total film thickness of 3mil (76µm) that is heat laminated in the factory to the interior surface of Aluminium jacketing.

PSMB is used on all Aluminium jacketing to help prevent pitting, crevices and galvanic corrosion of the interior surface of metal jacketing and the insulated pipe, tank or equipment.
